

Data Centers:

The RSP utilizes at least two **Tier III** (as defined in the Tier Classification System) or equivalent data centers, each with no inter-dependencies.

- All our data centers are secure, have redundant cooling and power supplies, and are designed for high availability.
- The facilities have multiple independent power and network connections, ensuring seamless failover in case of outages.
- Strict physical and cybersecurity measures are in place to protect the infrastructure from threats and unauthorized access.

Currently we use the following data centers:

- BIT-2 datacenter (<https://www.bit.nl/?from=nl>)
- Datacenter Arnhem (<https://www.eurofibercloudinfra.com/en/about-us/data-centers-netherlands/data-center-arnhem>)
- Equinix datacenters (<https://www.equinix.com/data-centers>)
